If you want the closest like-for-like swap, the Veepeak OBDCheck BLE+ is the most direct alternative. At £39.99, it costs more than the main Veepeak OBDCheck BLE, but it also scores slightly higher at 4.6★. The main advantage is that it should appeal to buyers who want to stay within the same Veepeak ecosystem while paying for a newer or more feature-rich version. The downside is simple: it's pricier, so if you only need to read and clear basic engine codes on a petrol or diesel car, the original is usually better value.

TOPDON CarPal A is the best choice if you want more than a basic code reader. Unlike the standard Veepeak, this one advertises all-system diagnosis, vehicle health checks, smog check support, repair guides, and performance tests. That makes it much more useful for drivers who want to dig deeper into faults, especially if you're trying to understand warning lights before a garage visit. The trade-off is price: at £45.99, it's a noticeable step up. It's a stronger pick for DIY mechanics or anyone who plans to use diagnostics regularly, but it may be overkill if you just want an occasional Bluetooth EOBD reader for MOT prep.

AstroAI Car Tyre Inflator is not a direct OBD alternative, but it's a smart buy if your real problem is keeping the car road-ready. At £49.99, it's more expensive than the Veepeak, but it solves a different issue: low tyre pressure, which matters for safety, fuel economy, and MOT checks. If you're shopping for practical car kit rather than engine diagnostics, this may be more immediately useful than a scanner. What it lacks is any fault-code reading or phone app integration, so it's only worth choosing if tyre maintenance is the priority.

The VICSEED MagSafe car mount is another non-diagnostic alternative, but it's a good option if you were originally looking at Veepeak as part of a wider car-accessory purchase. At £27.03, it's close in price to the main product and has a strong 4.6★ rating. It's better if your priority is keeping your phone secure and visible for navigation, especially on bumpy UK roads or during long motorway journeys. It's worse if you actually need OBD functionality, so only choose it if the scanner was a secondary consideration.

The handheld vacuum cleaner is the least like-for-like option, but it's a useful alternative for drivers who want a cleaner cabin rather than diagnostics. At £25.49, it's slightly cheaper than the main Veepeak and offers practical value for family cars, work vans, or anyone dealing with crumbs, pet hair, and winter mud. It clearly loses on technical usefulness because it cannot read fault codes, but it may be the better purchase if your car already runs fine and you'd rather improve day-to-day comfort than troubleshoot the engine.

Overall, the best alternative depends on what you actually need: more diagnostic depth, a tyre pump for MOT prep, or a useful car accessory that solves a different problem entirely. For most UK drivers, the most sensible upgrades are the TOPDON CarPal A for serious diagnostics or the Veepeak OBDCheck BLE+ if you want a familiar Bluetooth scanner with a better rating.

Still Buy the Original If...

Choose the original Veepeak OBDCheck BLE if you want a simple, affordable Bluetooth OBD reader for checking engine lights and basic EOBD faults. It's still the best value if you don't need advanced system diagnostics or extra features.
